Jan 1888

Babylonia

d. of Ravina II.

Hindu civil year is based upon a sidereal solar year which does not take into account the precession of the equinoxes. Hence there is a slight discrepancy between their year and a true astronomical tropical yr.

Moreover the Hindus are divided in their allegiance to 3 different figures for a solar year.:

365d 6h 12.05m - according to AKYABHATA
365d 6h 12m £30.915 according to
the RAJAMERIGARA; 365 days 6h 12m
and 36.56 sec according to the Surya -
Siddhanta. Aryabhatas records the
gaining by 5 days in 576 yrs. His
error is larger as the sun enters Karka (ARIES)
in 603 A.D. that was on Mar 20.1 now,
because of precession it is occurring
in April

When ARYABHATA wrote his
ARYABHATIYA in 499, at the
precocious age of 23, Gupta Culture
and learning remained at a
high point

But now the Huns had broken
through the Gupta's main
defensive lines to devastate

part of north-western India. But
unlike him, the 6 upst, with help from
the Chinese in the north had weakened
the military strength of the Arabs on the
year to the point that the invaders were
unable to thoroughly conquer the Indian
or destroy their culture.

they set up a kingdom, but were
reached KUSUMAPUR. When he was
66 years old. The Indian invaders drove the Arabs
back to KASHMIR
